

MANAGED FIREWALL SERVICES

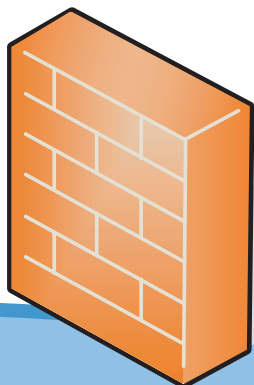

FEATURES

- **Virus and malware protection.** Virus and spyware definitions are automatically downloaded several times a day for up-to-the-minute protection of e-mail.
- **Customizable controls.** You may choose an appropriate level of control over the traffic into and out of your network, or let the system determine what's best
- **Custom spam filtering.** Bayesian filtering and e-mail whitelists and blacklists are built right into the firewall software.
- **Custom design and implementation available.** ENA can design the most effective solution for your school system's unique needs.

"I was pleasantly surprised by the quick and painless installation. It's easier to sleep at night knowing that the firewall is in place."

- Gary Lilly, Technology Coordinator

The Challenge

It used to be enough to have a lock on your school doors to keep unauthorized intruders out. In today's digital world, schools must invest time and money building a security system to prevent unauthorized access to both their technology resources and their facility.

The Solution

ENA specializes in designing an integrated firewall solution that provides you network security and peace of mind. A firewall is a set of related programs, located at a network gateway server, which protects the resources of a private network on users from other networks. Basically, a firewall, working closely with a router program, examines each network packet to determine whether or not to forward it to toward its destination.

ENA approaches network security from an overall network perspective, ensuring that your firewall service is an integral component of your overall information security policy. You decide the level of protection you need for complete control over traffic both into and out of your network. The end result is a system that enables you to take full advantage of the Internet's enormous resources and capabilities without compromising the integrity of your information or technology investment.

Enterprise-class Spam and Virus Protection

Building on its solid antivirus capabilities, the ENA Managed Firewall Service includes e-mail spam and spyware protection, wireless device protection, built-in privacy protections, and customizable controls, including our highly ranked toll-free customer support for the life of the service. The software automatically checks for new virus updates every three hours, while spam prevention offers a whitelist, blacklist, and Bayesian filter – all at a price substantially lower than many other antivirus suites.

ENA leverages its many years of experience and outstanding record of success in directing and managing large, complex educational technology projects. Through this we are able to reduce costs and implementation time for our customers. Our customers know ENA as a reliable partner, with expert knowledge in education technology, and as a one-of-a-kind provider of effective, affordable implementation and consulting services.

ENA provides multiple firewall solutions to meet the needs of our various customers.

Your Own Hosted Firewall

With ENA's help, your own hosted firewall solution allows each school system to purchase, own, and maintain its own firewall, while ENA installs and manages the overall firewall solution.

ENA's Centrally Hosted Firewall

ENA's Centrally Hosted Firewall is a highly reliable, enterprise-class solution. ENA manages this firewall configuration, procuring, implementing, maintaining, and supporting all software and hardware components contained in the firewall.

Your Own Hosted Firewall

Enhanced Internet Access Upgrade. ENA provides all services necessary to integrate your self-managed firewall into the network, including all hardware, software, maintenance, and support.

Firewall Device Support. ENA will provide consulting services on an hourly basis. Firewall consulting services focus on the following needs:

Firewall Device Support: ENA will provide consulting services on an hourly basis. Firewall consulting services focus on the following needs:

- **Assessment:** Analyzing your network solution for your organization.
- **Design:** Planning the right firewall solution for your organization.
- **Software and Hardware Selection:** Choosing the best firewall solution available.
- **Customization:** Adapting and implementing your firewall to your specific network configuration.
- **Support:** Supporting the ongoing configuration, operation and maintenance of your firewall solution.

Centrally Hosted Firewall

- **Hosted Redundant Firewall:** ENA will provide a school system's firewall service on redundant Cisco Pix firewall devices hosted at ENA's Super POP. This centrally hosted hardware configuration minimizes potential downtime from user error, device failure, or routine maintenance.
- **Assessment:** ENA will analyze a school system's infrastructure for risks and vulnerabilities.
- **Custom Design:** ENA will provide a custom configuration based on your specific network and security needs.
- **Support:** ENA will monitor and support the ongoing configuration, operation and maintenance of your firewall solution including all hardware and software maintenance, repair, and related costs.
- **No Hidden Costs:** All costs are included in the monthly service price. This solution requires no separate equipment purchases. All support, maintenance and repairs are included.

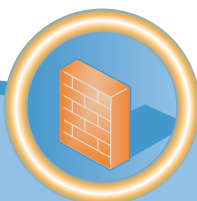

About ENA, Inc.

ENA provides managed network and technology solutions for school systems, libraries, and governments. ENA was founded with a vision to provide technology solutions that make reaching and using valuable information as easy and reliable as turning on the lights. Since building the first statewide K-12 network in the United States in 1996, we have established a reputation as a reliable partner with expert knowledge in Internet access, broadly distributed networks, value-added customized services, and funding sources such as E-Rate.
