

DATA CENTER DISASTER TALES!

AND HOW ENA CAN HELP

In the blink of an eye, your organization's data can be lost, stolen, or simply damaged beyond repair. Discover how you can leverage ENA's cloud solutions to prevent your organization from experiencing its own data disaster.

THE SUDDEN FIRESTORM

A raging wildfire swept through one city, engulfing everything in its path. The local school district's on-site data center, which housed all the district's critical applications systems, was placed in jeopardy. Luckily, the fire changed course at the last minute and the district's data was spared from destruction.

THE VILLAINOUS EMAIL

A college professor received a "verify your security info" email from Blackboard that looked exactly like the communications she normally received from that application. As soon as she hit submit on the seemingly familiar landing page, she received a ransomware message to pay up or risk losing the college's data.

THE FORGOTTEN WATER PIPE

A rusty, aged pipe cracked unexpectedly in the middle of the night, sending a deluge of water that quickly flooded a library's data center and damaged a million dollars' worth of hardware. The staff used hairdryers to salvage what they could, but they lost more than half of their hardware and compromised their organization's data.

THE SUPPRESSION SYSTEM

A local hospital's fire suppression system kicked into gear after mistakenly detecting a heat source, damaging a large percent of the hospital's on-site data center. The hospital's payroll data was irrevocably lost. Staff members had to spend months manually piecing salary information together from scraps of paper and physical personnel records.

3 ENA Cloud Solutions That Can Save Your Organization From a Data Disaster

ENA TrustCompute

ENA TrustCompute is our fully hosted and managed virtual data center service that allows you to easily build resilience into your computing environments for improved service availability and recoverability in the event of a disaster.

ENA TrustBackup

ENA TrustBackup is a comprehensive file backup solution that protects users against data loss. The solution allows you to schedule regular backups and store backup data within ENA's secure cloud. ENA TrustBackup is forever forward, meaning that after the first complete backup, only changed data gets backed up moving forward.

ENA TrustVault

ENA TrustVault is cloud-based storage within an industry standard API that enables users to access and manage their data via a flexible interface. Data is stored across multiple devices to ensure redundancy and resiliency. This cost-effective repository solution is ideal for organizations that already have a backup utility but need an off-site back storage solution.
