

In-Depth Security Assessments to Identify and Minimize Your Cyber Risk

Understanding your organization's cyber risk is a key step in safeguarding against network security threats and preventing costly outcomes, such as critical data loss. That's why ENA offers a portfolio of comprehensive security assessment services designed to help your organization pinpoint and patch network vulnerabilities.

Select the services that best fit your cybersecurity needs:

Strategic security assessment

Network vulnerability scan

Internal and external penetration test

Web application assessment

The full range of diagnostic tests and techniques designed to uncover gaps in your network security includes:

- High-level review of organizational policy, procedure, and governance
- Network testing against a database of known security threats and standards
- Ethical hacking techniques designed to identify holes in security
- Vulnerability scans of all computers and applications

Know your network!

Dedicated support and detailed reporting give you the insight you need to prepare for the unexpected. Each assessment includes:

- A holistic risk assessment report
- A comprehensive list of identified vulnerabilities, prioritized by risk level
- A remediation roadmap with actionable suggestions to reduce exposure
- The option of retesting to assess remediation efforts
- A dedicated project manager with expert knowledge of your unique security needs
- One-time or recurring service model
