

An S3 Compatible Storage Solution You Can Rely On

ENA TrustVault is cloud-based storage within an industry standard API that enables users to access and manage their data via a flexible interface. This solution is ideal for organizations that already have a backup utility or software application but need an off-site backup storage solution.

ENA TrustVault Features You Will Appreciate

Highly-scalable, cloud-based storage that can be used for a variety of use cases including backup and archiving

Secured data that is redundantly stored across multiple devices to ensure resiliency and durability

Choice of two provisioning regions

Affordable and cost-effective

Flat-rate billing—no additional charge for data operations or retrieval

Compatible with client-side encryption as well as server-side encryption with customer provided keys (SSE-C)

Leverages an industry standard object storage API for storing unstructured data in the cloud

Ability to generate access credentials for any S3 compliant client through the ENA TrustVault administrative portal

HIPAA compliant—keeps critical documents and patient information protected and secure

ENA TrustVault Enables You To

- Create redundant and widely-available storage buckets to host videos, photos, music, and media uploads and downloads
- Manage, access, and deploy web applications
- Host software applications for user access and download
- Use your organization's current backup software to build a secure storage location for project resources and data points

ENA TrustVault Administrative Portal

With ENA TrustVault, you have access to an administrative portal that lets you

- Generate access credentials for any S3 compliant client
- Manage and organize stored data
- Share URLs to stored files
- View storage usage
- Set and manage multiple access types and privileges for each user
